Guidelines to name/create tables/fields in this sheet	
Field types: - string - text (for long strings) - number - decimal_number - boolean - date - datetime - reference - email - enum (when there are multiple options, example payment_modes)	
Name of table should be in plurals, ex: users, user_enrolments	
Name of field should be singlular, ex: id, name, user_id	
Naming convention: use_underscores_everywhere	
Unique fields and references should be in CAPITAL LETTERS	
Guidelines to create schema in DB	
Each table will contain timestamps: - created_at - updated_at	
Each table which can get entries from the user will contain created_by which will refer to the user who creates that entity in the db:
